# Supplementary Information to
Carbon pricing, cash transfers and poverty

October 2022

1 Figures

Figure A1: Carbon Footprints over Total Household Expenditures

Note:

This figure displays individual carbon footprints from consumption (y-axis) over total household consumption (x-axis, in USD) for households from 16 countries in Latin America and the Caribbean.

Figure A2: Visualisation of Robustness Check on Measure of Horizontal Inequality $\widehat{H}_r^1$
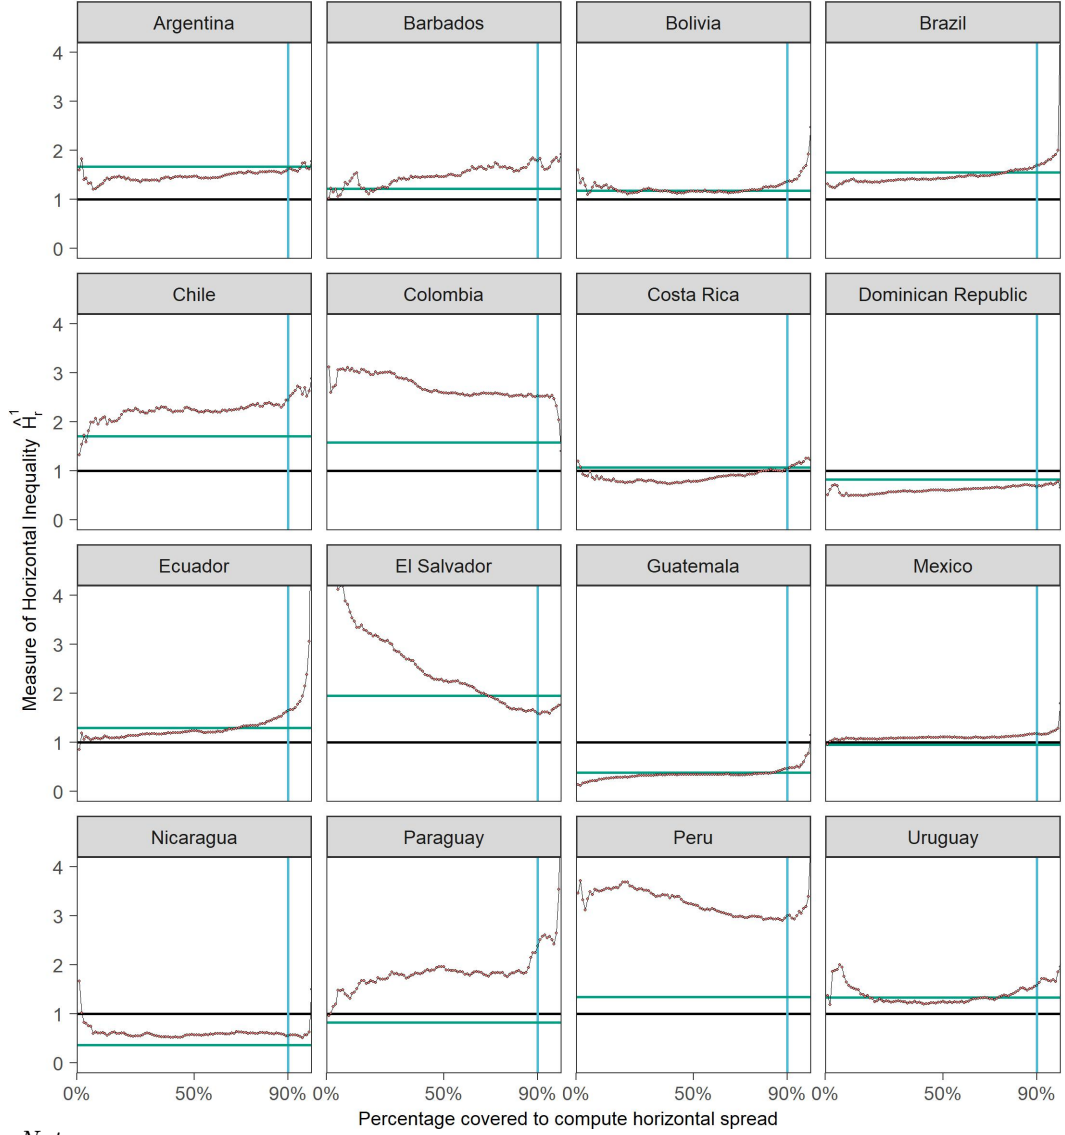

Note:

This figure displays the measure of differences in horizontal inequality across expenditure quintiles $\overline{H}_r^1$ across the percentage of households covered within both, the 1st and the 5th expenditure quintile to compute horizontal spread (brown line). A value of 50% would indicate that the evaulation of differences in horizontal inequality between the 1st and 5th would rest on comparing the spread in carbon price incidence between 50% of households within each quintile, i.e. the 25th to 75th percentile. Our preferred measure in this study captures 90% of households (blue line), i.e. compares the 5th to 95th percentile. The black horizontal line indicates a level of 1, for which within quintile inequality would be identical in both, the 1st and the 5th expenditure quintile. Values above the black line indicate that horizontal differences are larger within the poorest quintile compared to the richest quintile. The green line indicates our measure on vertical inequality $\widehat{AC}_r^1$. It expresses differences between the median carbon price incidence of the poorest and richest expenditure quintile. If the green line is above the black line, this implies that a carbon price would be regressive at the median.

Figure A3: Decomposition of Expenditure Types which explain Variance in Carbon Pricing Incidence

Note:

This figure plots the relative contribution of each expenditure type to explaining variation in carbon pricing incidence. We follow the method proposed by Shorrocks (1982) to calculate the factor weight s_j of each expenditure type X_j. We decompose the carbon pricing incidence into the contribution of each expenditure category to aggregate carbon pricing incidence. s_j equals the covariance of each component X_j and carbon pricing incidence divided by the variance in carbon pricing incidence, i.e. $s_j = \frac{cov(X_j, AC)}{\sigma^2(AC)}$.

Uruguay	3.7	1.8	2.6	3.4	4.5	6.4	0.78%	0.92%	0.81%	0.77%	0.72%	0.66%

Note:

This table shows average carbon footprints in tCO$_2$ and average levels of carbon price incidence for households in 16 countries of Latin America and the Caribbean. Wes estimate household-weighted averages for the whole population and per expenditure quintile.

Table A4: Comparing Median Additional Costs (AC) and Horizontal Spread between first and fifth Expenditure Quintile

Country	$\overline{AC}_r^1$	$\overline{AC}_r^5$	$\overline{H}_r^1$	$\overline{H}_r^5$	$\overline{H}_r^{1*}$	$\overline{H}_r^{5*}$	$\widehat{AC}_r^1$	$\widehat{H}_r^1$	$\widehat{H}_r^{1*}$
Argentina	3.56%	2.13%	6.51%	4.02%	2.92%	2.02%	1.67	1.62	1.45
Barbados	2.30%	1.89%	5.36%	3.00%	2.37%	1.49%	1.22	1.79	1.59
Bolivia	2.68%	2.27%	3.42%	2.50%	1.36%	1.19%	1.18	1.36	1.15
Brazil	2.37%	1.52%	4.88%	2.87%	2.10%	1.42%	1.56	1.70	1.48
Chile	2.24%	1.31%	3.46%	1.42%	1.61%	0.73%	1.71	2.44	2.20
Colombia	1.90%	1.20%	6.08%	2.40%	2.82%	1.11%	1.58	2.53	2.55
Costa Rica	0.86%	0.80%	2.66%	2.57%	1.19%	1.36%	1.07	1.03	0.88
Dominican Republic	1.56%	1.88%	3.03%	4.49%	1.44%	2.26%	0.83	0.68	0.64
Ecuador	2.06%	1.59%	4.61%	2.79%	1.71%	1.40%	1.30	1.65	1.23
El Salvador	2.38%	1.22%	5.60%	3.51%	3.27%	1.51%	1.96	1.60	2.17
Guatemala	0.74%	1.92%	1.90%	4.08%	0.67%	1.94%	0.39	0.46	0.35
Mexico	2.19%	2.28%	5.03%	4.26%	2.30%	2.10%	0.96	1.18	1.09
Nicaragua	0.74%	2.04%	1.92%	3.45%	0.91%	1.50%	0.37	0.56	0.61
Paraguay	1.00%	1.20%	6.15%	2.58%	2.13%	1.17%	0.83	2.38	1.82
Peru	2.09%	1.55%	6.56%	2.19%	3.28%	1.06%	1.35	3.00	3.11
Uruguay	0.75%	0.56%	1.94%	1.22%	0.78%	0.62%	1.34	1.59	1.25

Note:

This table shows the median additional costs from carbon pricing in the first expenditure quintile ($\overline{AC}_r^1$) and in the fifth quintile ($\overline{AC}_r^5$). It displays the difference between the 5th (20th) and 95th (80th) within quintile percentile incidence for the first ($\overline{H}_r^1$ and $\overline{H}_r^{1*}$) and the fifth quintile ($\overline{H}_r^5$ and $\overline{H}_r^{5*}$). It also compares median additional costs from carbon pricing in the first income quintile to that in the fifth quintile ($\hat{AC}_r^1$). Lastly it displays our comparison index facilitating the comparison of within quintile variation between the first and fifth quintile ($\hat{H}_r^1$ and $\hat{H}_r^{1*}$ respectively).

Table A5: Correlation Coefficients for Carbon Pricing Incidence and Expenditure Shares on different Consumption Categories

Country	Energy	Goods	Services	Food
Argentina	0.97	-0.32	-0.28	-0.07
Barbados	0.94	-0.17	-0.20	-0.23
Bolivia	0.81	0.10	-0.27	0.01
Brazil	0.84	-0.11	-0.29	-0.14
Chile	0.90	-0.23	-0.26	0.06
Colombia	0.80	-0.28	-0.03	-0.06

Uruguay	0%	2.7%	0%	21.3%	0%	30.9%	0%	41.5%	3.5%	0%	11.1	3.2

Note:
This table provides summary statistics for electricity generation in 16 different countries of Latin America and the Caribbean. It reports the share of electricity generated by each source in each country in 2020 [%] as well as the total annual electricity consumption [TWh] and per capita [Mwh]. Source: IEA (2021) and Our World in Data (Ritchie et al. 2020) for Barbados. Annual electricity consumption for Peru refers to 2019.

Table A8: Summary Statistics on Access to Transfer Programmes

Country	Households with access to transfer programs	Of the most affected 20% of households, how many...		
		...are poorer than 80 % of the population?	...have access to governmental transfer programs?	...are poorer than 80 % of the population and have no access to governmental transfer programs?
Argentina	46.8%	34%	48.3%	13.5%
Barbados	22.5%	25.1%	27.4%	17.8%
Bolivia	28.2%	25%	40.8%	14.2%
Brazil	60.1%	33.8%	55.2%	11.6%
Chile	30.8%	45.2%	36.8%	22.8%
Colombia	55.1%	32.6%	54.2%	13.6%
Costa Rica	40.9%	17.3%	34.6%	6.8%
Dominican Republic	39%	16.2%	32.2%	8.3%
Ecuador	35.3%	31.3%	39.2%	14.7%
El Salvador	10.2%	41.2%	11.1%	36.5%
Guatemala	25.1%	5%	23.8%	3.5%
Mexico	42%	18.2%	42.3%	9.4%
Nicaragua	60.7%	5.1%	55.9%	1.6%
Paraguay	7%	21.6%	5.5%	21.1%
Peru	32.6%	34.6%	36.4%	18.6%
Uruguay	57.2%	26.2%	48.8%	8.7%

Note:
This table reports shares of total population and shares of the 20% of population with highest carbon pricing incidence adhering to different criteria for 16 countries in Latin America and the Caribbean.

Table A9: Comparison of households with high carbon price incidence and no access to transfers compared to the total population (in parentheses).

Country	Av. HH Exp. [USD]		Car owners		Urban		LPG users		Gas users		Firewood users	
Argentina	11,635	(14,437)	0.73	(49.1%)			0.38	(35.1%)	0.605	(63%)		
Barbados	13,332	(16,842)	0.797	(52.3%)			0.796	(72.6%)	0.151	(19%)		(0.1%)
Bolivia	3,046	(3,688)	0.246	(16.8%)	0.727	(68.7%)	0.561	(58.1%)	0.309	(26.7%)	0.089	(11.5%)

Note:
This table displays regression results from equation (8) on the carbon price incidence of any household in Argentina. Coefficients are estimates on regressions on the full sample and separated by expenditure quintile. Reference group for education (*ISCED*) is ISCED-level 1 and *Electricity* for cooking fuel (*CF*).

Note:
This table displays regression results from equation (8) on the carbon price incidence of any household in Barbados. Coefficients are estimates on regressions on the full sample and separated by expenditure quintile. Reference group for education (*ISCED*) is ISCED-level 1, *Electricity* for cooking fuel (*CF*) and *Black* for ethnicity (*ETH*).

Note:
This table displays regression results from equation (8) on the carbon price incidence of any household in Colombia. Coefficients are estimates on regressions on the full sample and separated by expenditure quintile. Reference group for education (*ISCED*) is ISCED-level 1, *Electricity* for cooking fuel (*CF*) and *Mestizo o blanco* for ethnicity (*ETH*).

Note:
This table displays regression results from equation (8) on the carbon price incidence of any household in Uruguay. Coefficients are estimates on regressions on the full sample and separated by expenditure quintile. Reference group for education (*ISCED*) is ISCED-level 1, *Electricity* for cooking fuel (*CF*) and *Blanca* for ethnicity (*ETH*).

Table A27: Contribution of each variable to explaining variance in carbon pricing incidence in Argentina

| | | Expenditure Quintile | | | | |
Sample:	Full Sample	1	2	3	4	5
HH Exp. (log)	0.633	0.868	0.310	0.087	0.044	0.055
HH Size	0.044	-0.091	-0.074	-0.024	-0.005	0.012
Electricity Acc.	0.004	0.032	0.000	0.001	0.002	NaN
Car Ownership	0.248	0.071	0.729	0.822	0.857	0.782

Note:
This table displays regression results from equation (13) on the log-odds transformed probability of higher additional costs than 80% of the population in Brazil as the dependent variable. We show model coefficients separately for the full sample and separated by expenditure quintile. Reference group for education (*ISCED*) is ISCED-level 1, *Electricity* for cooking fuel (*CF*) and *Parda* for ethnicity (*ETH*).

Note:
This table displays regression results from equation (13) on the log-odds transformed probability of higher additional costs than 80% of the population in Dominican Republic as the dependent variable. We show model coefficients separately for the full sample and separated by expenditure quintile. Reference group for education (*ISCED*) is ISCED-level 1 and *Electricity* for cooking fuel (*CF*).

Note:
This table displays regression results from equation (13) on the log-odds transformed probability of higher additional costs than 80% of the population in Mexico as the dependent variable. We show model coefficients separately for the full sample and separated by expenditure quintile. Reference group for education (*ISCED*) is ISCED-level 1, *Electricity* for cooking fuel (*CF*) and *Non-Indigeneous* for ethnicity (*ETH*).

Note:
This table displays regression results from equation (13) on the log-odds transformed probability of higher additional costs than 80% of the population in Uruguay as the dependent variable. We show model coefficients separately for the full sample and separated by expenditure quintile. Reference group for education (*ISCED*) is ISCED-level 1, *Electricity* for cooking fuel (*CF*) and *Blanca* for ethnicity (*ETH*).

Note:

This table displays regression results from equation (15) on the log-odds transformed probability of higher additional costs than 80% of the population in Bolivia and having no access to governmental transfer programs as the dependent variable. We show model coefficients separately for the full sample and separated by expenditure quintile. Reference group for education (*ISCED*) is ISCED-level 1, *Electricity* for cooking fuel (*CF*) and *Non-indigeneous* for ethnicity (*ETH*).

Note:
This table displays regression results from equation (15) on the log-odds transformed probability of higher additional costs than 80% of the population in Costa Rica and having no access to governmental transfer programs as the dependent variable. We show model coefficients separately for the full sample and separated by expenditure quintile. Reference group for education (*ISCED*) is ISCED-level 1 and *Electricity* for cooking fuel (*CF*).

Note:
This table displays regression results from equation (15) on the log-odds transformed probability of higher additional costs than 80% of the population in Peru and having no access to governmental transfer programs as the dependent variable. We show model coefficients separately for the full sample and separated by expenditure quintile. Reference group for education (*ISCED*) is ISCED-level 1, *Electricity* for cooking fuel (*CF*) and *Mestizo* for ethnicity (*ETH*).
